# Mini Touch

## 8 Function - Gen II Control Pad

The Mini Touch provides a flexible alternative to control a vehicle's secondary functions. Each switch can be configured to fit a driver's unique needs. Wireless RF technology allows the controller to be mounted in any position that is convenient for the driver.

This system can easily control up to 8 vehicle functions such as the turn signals, windshield wipers, dimmer, etc.

### ■ **Ergonomic Design**

Switch locations and orientations are designed for optimal ergonomic operation and set in an attractive housing for an "integrated" look.

### ■ **Transferrable**

Once purchased, the basic MINI-TOUCH system will transfer into most makes and models with the purchase of a new custom vehicle interface package.

### ■ **Original Controls Operate Normally**

Original controls remain fully functional for non-disabled drivers.
